

STORY W09. ERROR PAGE

As a user

I want to see an error page when something unexpected happens so that I can see what the problem is.

WIREFRAMES

TECHNICAL DETAILS

- Use the standard JSP error page mechanism.

ACCEPTANCE CRITERIA:

- An error page is shown when an error occurs that cannot be anticipated (requested page does not exist, problem connecting to the database, ...)
- The error page is NOT shown when the users makes a mistake that can be anticipated (no value for a required input field, ...). In this case error messages are shown as described in other stories).
