

# Lab 9

---

In this lab you

- learn to use the PRG pattern
- prepare the refactoring of the coming labs.

1. Implement *StoryW18\_Refresh* (**Very High Priority**).
2. Refactor your controller class, if need be. Make sure:
  - a. you call a private method for each action
  - b. all those private methods have the **same set of parameters** (the request and response objects) and **return type** (void).
