## STORY W08. PERSON OVERVIEW DESKTOP

As a user
I want to be able to check the overview of persons stored in the database without starting the web application
so that I quickly can see who is registered.

EXAMPLE:

```
<terminated> Desktop [Java Application] /Library/Java/JavaVirtualMachine
Mieke Kemme: miekem, mieke.kemme@ucll.be
Greetje Jongen: grejon, greetje.jongen@ucll.be
Elke Steegmans: elste, elke.steegmans@ucll.be
```

TECHNICAL DETAILS:

- Create a new package for the desktop user interface class
- The user interface can be very simple:
    - One class with a *main* method that shows the persons using `System.out.println()` will do.
    - See the example "`CountryDbDemo`" on the slide 19.

ACCEPTANCE CRITERIA:

- In the overview, a line is shown for each registered user
- For each user, following fields should be visible: firstname, lastname, userid and email
