Lab 4

In this lab you will protect your websites.

For your own safety:
first create a copy of your current project, to use for the test.

Assignment: user management

Step 1: XSS

Protect your website against cross-site scripting. Use the `<c:out>` tag or the `{fn:escapeXml()}` function wherever you do not trust the data shown.

Step 2: SQL Injection

Use prepared statements to avoid SQL Injection.

Step 3: Passwords: **Very High Priority**

Implement the story: StoryW10_Check Password

Homework: Products

Protect your product pages against cross-site scripting.
